

10/518908
DT01 Rec'd PCT/PTC 23 DEC 2004

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-17 Cancelled.

Claim 18 (New): Use of composition containing

at least one saline chloride compound in the form of a salt of an alkali or an alkaline earth metal and at least one suitable oxidation means for the in situ production of chlorine during the dissolution of the composition in an aqueous solution, where the oxidation potential of the oxidation means in an aqueous solution is higher than the oxidation potential of Cl^1/Cl^0 at least in the claimed range,

an acid in such quantity that the composition dissolved in a certain quantity of an aqueous solution will produce a pH-value of less than 6, preferably less than 5.5 and even more preferably less than 5, as well as

whenever appropriate, a surface-active substance (tenside) or substance mixture, aromatic substance adjuvants and binders,

for the disinfection of dental objects such as toothbrushes, dentures and the like contaminated by candida or parts of the body that have been attacked by candida.

Claim 19 (New): Use in accordance with Claim 18, characterized in that the composition is available in the form of a mixture of solids, especially a granulate or a tablet.

Claim 20 (New): Use in accordance with Claim 18, characterized in that the composition contains means for accelerating the dissolution (effervescent salts – effervescent), for example a compound containing a carbonate or bicarbonate such as, for example sodium carbonate or sodium bicarbonate, and at least a stoichiometric quantity of acid for the production of a pH-value of less than 7 is contained in the composition.

Claim 21 (New): Use in accordance with Claim 18, characterized in that a hydrogen peroxosulphate compound is contained as oxidation means.

Claim 22 (New): Use in accordance with Claim 18, characterized in that the composition contains at least potassium hydrogen peroxosulphate as oxidizing agent, a saline chlorine compound, e.g. cooking salt (NaCl) as chloride compound and a carbon acid, preferably a mono-, di- or tricarbon acid, such as tartaric or citric acid, for the production of an acid pH-Value in the dissolved composition.

Claim 23 (New): Use in accordance with Claim 18, characterized in that the composition contains a binder and, optionally, aromatic and colouring substances and adjuvants such as substances for softening the water, fillers and the like, and is available in tablets or granulate form.

Claim 24 (New): Use in accordance with Claim 18, characterized in that the composition contains at least one tensed (surface-active substance or substance mixture).

Claim 25 (New): Use in accordance with Claim 18, characterized in that the composition is available in the form of a self-dissolving cleaning tablet.

Claim 26 (New): Use in accordance with Claim 25, characterized in that the composition or cleaning tablet has a homogeneous composition.

Claim 27 (New): Use in accordance with Claim 25, characterized in that the composition or the cleaning tablet is dissolved in an aqueous solution, preferable in water, in the presence of the object or body part that is to be disinfected.

Claim 28 (New): Use in accordance with Claim 18, characterized in that the binder is a copolymer of ethylene oxide and propylene oxide, polyvinyl pyrrolidon or a copolymer of polyvinyl pyrrolidon and vinyl acetate.

Claim 29 (New): Use of a composition containing
at least one saline chloride compound in the form of salt of an alkaline or alkali earth metal and at least one suitable oxidizing agent for the in situ production of chlorine during the dissolution of the composition in an aqueous solution, where the oxidation

potential of the oxidizing agent in aqueous solution is greater than the oxidizing potential of $C1^1/C1^0$ at least within the claimed pH-range,

an acid in such quantity that the composition dissolved in a certain quantity of an aqueous solution produces a pH-value of less than 6, preferably less than 5.5 and even more preferably less than 5.0, as well as

whenever appropriate, a surface-active substance (tenside) or substance mixture, aromatic substances, adjuvants and binders,

for the production of a pharmaceutically effective means for treating body parts contaminated or affected by candida albicans.
